GIRIDHAR REDDY GODDILLA

Luton, UK | +44 7765508654 | giridharreddygoddilla@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data analytics and data science professional with experience across data analysis, business intelligence, Python-based ETL workflows, interactive dashboard development, and machine learning. Skilled in using Python, SQL, Excel, Power BI, and Tableau to clean and transform data, explore trends, monitor KPIs, and communicate findings. Currently pursuing an MSc in Data Science at the University of Hertfordshire, with project experience in multimodal movie genre classification, student performance analytics, and relational database design.

EDUCATION

University of Hertfordshire, Hatfield, UK **Sep 2024 – Sep 2026**

MSc in Data Science

Coursework: Data Science, Data Analytics, Machine Learning, Statistical Modelling, Deep Learning, NLP, CNNs and LSTMs

Lovely Professional University, Punjab, India **Aug 2019 – Aug 2023**

Bachelor of Tech in Computer Science and Engineering

Coursework: Data Structures and Algorithms, OOP with Python, DBMS, SQL, Data Science Foundations, Power BI and Tableau

EXPERIENCE

Victoria Solutions **Oct 2025 – Nov 2025**

Data Analyst Intern London, UK

- Built an interactive Excel dashboard on 197,430 Swiggy food records (Jan–Aug 2025), tracking five KPIs: INR 53.01M sales, INR 268.51 average order value, 4.34 average rating, 5.59M ratings, and 197K records.
- Engineered day, quarter, week, and veg/non-veg fields using TEXT, WEEKNUM, SEARCH, and IF formulas; analysed sales by month, weekday, quarter, state, and city with PivotTables and month, restaurant, and category slicers.
- Identified steady daily sales of about INR 218K across quarters, a Saturday peak (INR 7.78M), and five cities generating 33% of sales, separating calendar effects (a 28-day February, a two-month Q3) from genuine change.
- Designed interactive Power BI and Tableau dashboards on retail datasets (data prepared in Excel, SQL, and Python) to monitor revenue, category performance, and discount effectiveness, and identified pricing and seasonal trends to support discount-strategy optimisation.

FOURP Technology Solutions Private Limited **Sep 2022 – Aug 2024**

Software Engineer Chennai, India

- Skills listed for this role: Microsoft Excel, SQL, and one additional skill.

E-Box **May 2021 – Aug 2021**

Python Intern Bengaluru, India

- Developed Python-based data analysis projects involving data cleaning, visualisation, and basic modelling.
- Built a supply chain analytics project on the DataCo dataset: cleaned and validated 180,519 order-item records (65,752 unique orders) in pandas and defined KPIs with documented denominators, reporting $36.78M sales, $3.97M profit, and a 57.29% late-delivery rate.
- Analysed delivery performance by shipping mode, finding scheduled-versus-actual days drove lateness (First Class 100% late) and flagging a data-definition issue.
- Examined profitability by category, product, and discount, identifying 18.71% of order items with negative profit.

PROJECTS

Fake Job Posting Detection Using Machine Learning and NLP

- Built an end-to-end fraud detection pipeline using exploratory data analysis, text preprocessing, TF-IDF, and engineered features to identify fraudulent job postings in a highly imbalanced dataset (4.8% fraud).
- Trained and compared LightGBM, XGBoost, SVM, and Gradient Boosting using fraud-class precision, recall, F1-score, PR-AUC, and precision-recall curves to assess performance under class imbalance.
- Achieved 97.32% accuracy with LightGBM, the strongest overall balance with a fraud-class F1-score of 0.706 and PR-AUC of 0.793; evaluated decision thresholds to support fraud-screening trade-offs.

Uber Trip Analysis Dashboard Using Power BI

- Built a three-page Power BI dashboard (Overview, Time Analysis, Trip Details) on 103,728 Uber bookings from June 2024 ($1.55M booking value), tracking six KPIs including average booking value ($14.98), trip distance, and trip time.
- Developed DAX measures and a disconnected-table measure selector with dynamic titles, so one control switches visuals between bookings, value, and distance; added slicers, bookmarks, and a trip-level details grid.
- Analysed demand by hour, weekday, vehicle, payment type, and location, finding UberX drives 37% of bookings, night trips (17:00–05:59) 37% of booking value, and Penn Station the top pickup zone (4,475 trips).
- Validated dashboard totals against the source data and flagged outlier trips (144-mile, 24-hour durations) that inflate average trip time, documenting limitations in the README.

SKILLS

- Python
- R
- SQL, SQLite
- Pandas, NumPy
- Data Cleaning & EDA
- ETL Workflows
- KPI Reporting
- Data Visualisation
- Power BI
- Tableau
- Excel, PivotTables
- Matplotlib, Seaborn
- Scikit-learn
- TensorFlow, Keras
- Git, GitHub, Jupyter, VS Code, Spyder

CERTIFICATIONS & AWARDS

1. Certificate of Excellence – Victoria Solutions
2. Student Representative Award – University of Hertfordshire
3. Excellent Project Award – 360DigiTMG

4. Distinction Level Science Exhibition Award – School Level
